As healthcare continues to grow in size and complexity, **what matters** are practical, affordable solutions that simplify supply and medication delivery and enhance patient safety.

Healthcare in the United States is in a state of flux.

Nurse and pharmacist shortages are at critical levels. Patient safety has become an imperative for clinicians, administrators, and legislators. Costs are at an all-time high. Despite significant advances in science and medical technology, many of the clinical and management processes used in healthcare facilities today have yet to experience such progress.

Information technology is playing an increasingly key role in enabling healthcare facilities to improve these

processes, helping them evolve into more efficient and cost-effective practices. As a result, healthcare facilities are able to focus on what ultimately matters most: providing quality patient care.

The Omnicell™ Solution

Omnicell provides an integrated suite of clinical infrastructure and workflow automation solutions for healthcare. These solutions include automated dispensing systems with an integrated Internet-based procurement application, clinical reference tools, and decision support capabilities.

Automated Dispensing Systems

Since 1992, Omnicell has been working to improve supply and medication distribution in the healthcare industry. At the core of Omnicell's solutions are feature-rich, automated dispensing systems—computerized cabinets and related software technology—that allow healthcare facilities to efficiently manage supplies and medications at the point of use. For more than 300,000 people at some 1,200 facilities with more than 20,000 cabinets every day, these systems automate medication and supply usage and inventory and improve decision-making.

Omnicell Supply Systems

For every area of the hospital—from the operating room to the emergency department—Omnicell provides a complete supply management system.

Omnicell Supply Systems:

- Provide quick and easy access to supplies at the point of use while improving patient care
- Increase efficiency and productivity for materials management and nursing
- Reduce consumption and inventory kept on hand
- Prevent stockouts by ensuring supplies are replenished in a timely and accurate manner
- Improve inventory and information management with reporting and analysis tools

Omnicell Pharmacy Systems

Omnicell Pharmacy Systems provide healthcare facilities with a complete system for the management of medications at the point of use.

Omnicell Pharmacy Systems:

- Provide quick and easy access to medications at the point of use while improving patient care
- Increase efficiency and productivity for pharmacy and nursing
- Monitor and control medication usage while improving compliance with JCAHO and DEA standards
- Improve clinical decision-making and ensure patient safety with a complete system of checks and balances
- Prevent stockouts by replenishing medications in a timely and accurate manner

Patient safety measures are afforded by the systems' ability to track clinician, patient, and drug data; display a patient's full drug profile; and alert clinicians of allergies.

Omnicell Supply and Pharmacy Systems are available in a wide variety of sizes and configurations, with many optional modules and features to meet the varying capacity and control needs of healthcare facilities.

Combination Systems

Integrating the benefits of both supply and pharmacy systems, Omnicell provides combination systems that allow healthcare facilities to manage supplies and medications within a single system. Such systems are ideal for areas such as the operating room, where space is limited. The unique architecture of the combination systems enables each department to manage its supplies and medications independently while tracking transaction data, inventory levels, expenses, and patient treatment costs through a single database.

Information Management Systems

Omnicell's information management systems allow healthcare facilities to take full advantage of their existing information systems while maximizing the use of automated dispensing technology.

OmniCenter®

The OmniCenter is a central server that manages the day-to-day operations of Omnicell Supply and Pharmacy Systems, providing product utilization and other essential reports for both supply and pharmacy within a single system. The system records each transaction by user, patient, item quantity, cost, and time and provides a wide range of periodic and on-demand reports to allow pharmacists and materials managers to make the most of automated dispensing systems.

DecisionCenter

DecisionCenter is a Web-enabled decision support system that provides a comprehensive suite of reports for easy and accurate decision-making. The system provides a variety of secure reports, including trend analysis, decision support, and regulatory compliance reports, drawing on current and historical data from Omnicell's automation systems.

OmniBuyer

Available as a standard option with Omnicell's automated dispensing systems, OmniBuyer is a secure, Internet-based procurement application that allows healthcare facilities to purchase supplies online while automating and integrating their existing requisition and approval processes. This easy-to-use system incorporates buyer-specific business rules such as spending limits, negotiated pricing, approval routing, and customized access profiles. OmniBuyer puts the power of an Internet procurement solution in the hands of healthcare providers without the time and expense of building a customized system.

MedCenterCity

Recognizing the power of information, Omnicell maintains MedCenterCity, a community content site for healthcare professionals. At www.medcentercity.com, visitors will find a wide assortment of articles, news, and features tailored specifically for pharmacists, materials managers, nurses, and other healthcare professionals.

Healthcare Expertise and Systems Integration

At the heart of Omnicell's solutions for healthcare is a deeply ingrained understanding of the healthcare industry. The company has a history of and expertise in serving the clinical infrastructure and workflow automation needs of the healthcare industry. This expertise allows Omnicell to interface its automated dispensing systems with healthcare facilities' ADT, finance, materials management, and pharmacy systems. To date, Omnicell has developed more than 1,600 live, proprietary software interfaces. Such integration is the backbone of Omnicell's efficiency and demonstrates its technical know-how in providing a complete solution for healthcare.

What matters is not only the “company,” but the company it keeps.

Partnerships with Industry Leaders

Omnicell maintains strong, collaborative relationships with other companies in the industry, recognizing that by working together, superior solutions to the needs of the healthcare industry can result.

AmerisourceBergen

AmerisourceBergen is a leading supplier of pharmaceuticals, specialty healthcare products, information management solutions, and consulting services. The agreement between Omnicell and AmerisourceBergen provides for the integration of Omnicell Pharmacy Systems and OmniBuyer with AmerisourceBergen's distribution services and software platform to enable healthcare facilities to automate the workflow associated with procuring and distributing medications.

Ariel Distributing

Ariel Distributing assists healthcare facilities with managing controlled substances. SecureFill is a bar-code-based system that improves the accuracy of medication replenishment and provides comprehensive reporting. SecureMed is a bar-code-based system that supports both central vault and remote medication inventories and tracks unusual activity and incomplete or missing documentation.

Commerce One®

OmniBuyer is powered by Commerce One's BuySite™ technology, which Omnicell has customized to meet the specific needs of the healthcare industry. Commerce One is a leading provider of electronic commerce solutions, enabling companies to significantly reduce operational costs and increase efficiency by automating the supply chain.

Global Healthcare Exchange

Global Healthcare Exchange (GHX) is an Internet-based, healthcare exchange that streamlines the procurement process, allowing hospitals and health networks to purchase medical and non-medical products and services. The partnership provides for the

integration of OmniBuyer, Omnicell's Internet procurement application, with the manufacturers and distributors that are members of the GHX supplier community.

Gold Standard Multimedia

Gold Standard Multimedia's Clinical Pharmacology™ drug information database is available directly from Omnicell cabinets. This Internet-accessible drug database includes information on indications, dosing, adverse reactions, and drug interactions, as well as patient education information. Full-color drug photos are available to help verify a medication.

IPA

IPA is a leader in the development of healthcare textile dispensing and retrieval systems. IPA shipped the first ScrubAvail™ system in March 1995 and currently dispenses and retrieves more than 8,000,000 scrub suits annually in the U.S. and Canada.

Rosebud Solutions™

Omnicell co-markets Rosebud Solutions' MEMS® system, which allows a healthcare facility to efficiently and accurately track medical equipment inventory. MEMS helps hospitals improve asset utilization, reduce costs, simplify processes, and improve patient care with better medical equipment information and management.

U.S. Pharmacopeia

U.S. Pharmacopeia's MedMARx™ medication error reporting and analysis software is available directly from Omnicell cabinets. The software provides a standardized framework for medication error reporting along with predefined and custom reports, charts, and graphs.
